ADVANCES IN STEM CELL RESEARCH

This unique symposium is designed to highlight progress in the continuum of stem cell science from early development into clinical applications. Scientists from across the globe will convene to share their latest stem cell research in areas such as pluripotency and early development and its adult counterpart, tissue stem cells and regeneration. Advances in understanding cellular plasticity through reprogramming and directed differentiation will be showcased as will the emerging field of tissue self-organization dynamics and innovative new technologies that are driving the field forward.
